Environment and Energy Policy

Bakcycle Recycling Industry and Trade Inc., in line with the principles of the circular economy, aims to effectively manage environmental and energy performance across its entire value chain in its journey of producing recycled polyethylene from plastic flexible packaging waste.

In line with this purpose, it commits to:

- Minimizing environmental damage by reducing greenhouse gas emissions, contributing to a sustainable future, and carrying out activities that will reduce its carbon footprint,
- Prioritizing the protection of natural life, biodiversity, and ecosystems throughout our activities, and ensuring that the ecological balance is observed,
- Being respectful to people and the environment by focusing on protecting our natural environment,
- Showing utmost care for the protection of water resources, soil, and local habitats in all our operations and new investments, preventing and minimizing the potential negative impacts of our activities on the ecosystem,
- Evaluating environmental impacts in all its investments and considering the best available techniques to ensure that impacts are minimized,
- Carrying out eco-friendly and sustainable landscape and environmental arrangement activities that will support the green texture within and around the facility,
- Being aware of the negative impacts of climate change and contributing to the process,
- Carrying out activities that will ensure the development and continuous improvement of an environmental culture and a sustainable corporate culture,
- Closely following global developments, scientific research, and technologies related to environmental management,
- Applying sustainability approaches in all business activities and product life cycle stages,
- Continuously improving all its processes by effectively managing its risks and opportunities,
- Ensuring the availability of information and resources necessary to achieve the targets,
- Increasing environmental performance in all processes,

- Reducing the wastes to be generated within the facility, increasing the recycling rate, and saving energy and raw materials by reducing the use of natural resources and raw materials,
- Carrying out activities to encourage all its stakeholders to increase the plastic recycling rate and maintaining its leadership in this regard,
- Ensuring the procurement of energy-efficient systems, products, and services that affect energy performance,
- Considering energy efficiency and energy saving in process design and investments, and reducing energy costs,
- Carrying out studies to increase awareness within the scope of the energy management system, and continuously improving energy performance and the energy management system,
- Increasing the share of renewable energy sources in energy use,
- Engaging in activities that will support the principle of sustainable development,
- Encouraging its employees to active participation and providing an open communication environment,
- Ensuring information security and business continuity in all its activities,
- Supporting and developing its suppliers within the scope of environmental and energy management system activities,
- Closely following technology and developing solutions for sector-specific environmental and energy problems,
- Taking customer demands into account and engaging in corrective activities, ensuring continuity in customer satisfaction,
- Complying with international and national legal legislations and all other relevant requirements, making declarations within the framework of the legislation, keeping necessary records, and organizing statistics,
- Managing relations with its stakeholders in a transparent manner and with a shared mindset,
- Increasing the competitive power in efficiency, strengthening our reliable company and brand image,
- Developing the environmental and energy awareness of employees, contractors, and other solution partners.
